

THIS IS AN AMMENDMENT TO PREVIOUS COMMENTS SUBMITTED BY ME

After discussion of my proposal with other amateurs, I've been persuaded to make two changes. Please substitute the following new paragraphs B. and C. to my original comments here.

- B. I propose that the current Novice sub-bands be set aside as a new "Experimental Reservation" for non-traditional and experimental modes such as digitized voice, digitized image, and other "forward looking" communications methods. Traditional modulation methods would be allowed in these segments only for brief coordination discussion during the testing of an experimental mode.
- C. I propose that the normal power output level of 1500W be allowed for those segments, but transmitters which are adjusted and capable of more than 50W must include auto-adaptive circuitry to reduce power to the minimum level needed to maintain reliable communications.

Respectfully submitted,

H. Hans Brakob, K0HB
